# ZJ Logix - Research & Decision Science

## Stochastic Optimization & Monte Carlo Simulation

Author: Zainab Jamshed | Date: January 2025

Category: Decision Optimization & Supply Chain Analytics

Executive Summary:

This research whitepaper presents an institutional-grade framework for stochastic variance modeling, predictive simulation engines, and decision-tree optimization under extreme market volatility.

Key Findings:

- 24% reduction in buffer inventory costs
- 4.2% uplift in service-level SLA fulfillment
- 99.8% stability under tail-risk market disruptions
